

Homework-5

April 11, 2017

1 Prediction of Restaurants rating based on review text of Yelp reviews

To be completed INDIVIDUALLY and due on April 18 at 3pm.

```
In [ ]: print('Your first name + last name')
```

**** (50 pts) ****

In this assignment, we will be working with the [Yelp dataset](#). You can find the format of the dataset [here](#).

Our aim is to predict the rating of each restaurant from the reviews **text** of individuals reviews. You can use any model you learned in the class and then evaluate your model.

```
